

Construction Studies

We can provide you with the knowledge you need for a successful career in construction.

From learning trades such as brickwork, joinery, carpentry and painting and decorating, or getting the skills you need for professional construction roles.

Our strong links with employers mean that we know which skills they are looking for and what opportunities are available locally. Many of our students go straight in to work or an apprenticeship at the end of their course.

As a construction student, you'll be able to take advantage of our purpose-built construction facility, East Block One.

It has several state-of-the-art workshops which have been fitted with all the latest industry-standard equipment, enabling you to develop high level skills in your chosen discipline.

We also have our new digital centre that hosts augmented reality site visits and virtual reality building design, providing you with cutting edge experience in construction technology.

Did you know?

The Construction apprenticeship team supported 22 Carpentry & Joinery apprentices to achieve 100%.
